KARIMI SOLMAZ	<b>pozytywna / positive</b>	The committee, taking into the account documents provided by Ms. Solmaz Karimi, her oral presentation as well as the following discussion, positively evaluated progress in completion of research tasks outlined in her individual research plan (she received 11 out of 20 possible points). The presented documentation indicates that the PhD student completed the required number of the ECTS points for this stage of studies, indicating she received adequate theoretical training. However, all committee members raised serious concerns regarding both the merit and technical issues related with performed experiments. Particularly, the committee was not satisfied with her knowledge and understanding of the research model she's been using and the number of creditable analyses (e.g. lack of minimal number of biological repeats and data reproducibility). Thus, following the current experimental approach presented by the student, the committee is skeptical regarding the possibility of publishing the data gathered so far in good quality journals. Both, the Ph.D. student and her supervisors pointed at a delay in the completing the experimental part of the project. Therefore, committee suggests strong engagement on the research tasks in order to complete research plan, which will allow preparation of the PhD dissertation with high quality of data on time.
